

GTIIT Spring 2025 Calculus 1M

Workshop 8

April 28, 2025

Try to solve the following exercises. Feel free to chat about them with your classmates, but make sure to write your own solutions. If you get stuck, just move on to the next one and come back later.

If you need any help at all —whether it's a tiny hint or a big clue— don't hesitate to ask me!

Important note: If you find any errors or typos, please let me know so I can correct them.

Exercise 1. Write as a single integral in the form $\int_a^b f(x)dx$:

$$\int_{-2}^2 f(x)dx + \int_2^5 f(x)dx - \int_{-2}^{-1} f(x)dx$$

Exercise 2. Use the properties of integrals to verify the inequality without calculating the integral:

(i) $\int_0^4 (x^2 - 4x + 4)dx \geq 0$,

(ii) $2 \leq \int_{-1}^1 \sqrt{1+x^2}dx \leq 2\sqrt{2}$.

Exercise 3. Let f be a continuous function on $[a, b]$. Show that $\left| \int_a^b f(x)dx \right| \leq \int_a^b |f(x)|dx$.

Exercise 4. Let f be a continuous function. Show that

$$\left| \int_a^b f(x)dx \right| \leq (b-a) \max_{x \in [a,b]} |f(x)|$$
