

GTIIT Spring 2025 Calculus 1M

Workshop 13

June 5, 2025

Try to solve the following exercises. Feel free to chat about them with your classmates, but make sure to write your own solutions. If you get stuck, just move on to the next one and come back later.

If you need any help at all —whether it's a tiny hint or a big clue— don't hesitate to ask me!

Important note: If you find any errors or typos, please let me know so I can correct them.

Exercise 1. Find the radius of convergence and interval of convergence of the series.

- $\sum_{n=1}^{\infty} \frac{(x-2)^n}{n^2+1} x^n$
- $\sum_{n=1}^{\infty} \frac{(2x-1)^n}{5^n \sqrt{n}}$

Exercise 2. Show that the function

$$f(x) = \sum_{n=0}^{\infty} \frac{(-1)^n x^{2n}}{(2n)!}$$

satisfies the equation:

$$f''(x) + f(x) = 0.$$

Exercise 3. Let

$$f(x) = \sum_{n=1}^{\infty} \frac{x^n}{n^2}.$$

Find the intervals of convergence for f , f' and f'' .

Exercise 4. Use the Maclaurin series in Table 1 (p. 768 Stewart's book) to obtain the Maclaurin series for the given functions:

- $f(x) = \sin(\pi x)$
- $f(x) = \sin^2(x)$

Exercise 5. Find the sum of the series

- $\sum_{n=0}^{\infty} \frac{3^n}{5^n n!}$
- $\sum_{n=0}^{\infty} (-1)^{n-1} \frac{3^n}{n 5^n}$
